Technology executive building sovereign AI delivery platforms for telecommunications operators.

EXPERIENCE

Chief Technology Officer

December 2025 – Present

Swarmio Inc

Halifax, NS

- 🏠 Own the application layer of a sovereign AI delivery platform end to end: tenant portal, APIs, instance provisioning, multi-tenancy and identity model, and usage accounting — deployed and operated across Kubernetes clusters and services
- 🔒 Production multi-tenant AI gateway: per-tenant isolation, virtual key lifecycle, budget ceilings, and spend attribution across hosted and self-hosted inference backends
- 📁 Set data residency architecture for regulated markets: per-cluster gateways and in-country inference terminate prompts inside the jurisdiction, with residual control-plane data covered by approved standard contractual clauses
- ☁️ Self-service provisioning and application catalogue: automated tenant onboarding, per-tenant resource allocation, and tenant-level utilization reporting and chargeback
- 🔍 Technical owner for operator GPU-as-a-Service proposals: tenant isolation, self-service portal, chargeback/showback, and GitOps cluster lifecycle requirements
- 🛠️ Drive agentic AI development practice across the engineering organization: agent swarms in daily use, supporting internal tooling, and workflow integration

VP, Development

May 2020 – December 2025

Swarmio Inc

Halifax, NS

- 🌐 Technical stewardship during high-growth phase from core team (<10) to global entity (>60 worldwide)
- 🌐 Direct teams across technology stacks and business units to deploy white-label platforms for major telecommunications providers including: Ooredoo Tunisia, Globe (Philippines), and Etisalat UAE
- 🔒 Lead platform technical design and delivery strategy across multiple applications and regions
- ☁️ Application and platform architecture for cloud-agnostic, multi-region Kubernetes deployment: scaled from hundreds to millions of supported users
- 🔍 Investigate and evaluate potential integration partners and acquisition targets for viability and compatibility (technical and strategic)
- 📁 Collaborate with key stakeholders in high-level planning sessions to foster strong communication and alignment on business priorities
- 🛠️ Create and evolve development & business processes for continuous improvement, efficiency, and cost optimization

Software Development Manager

September 2018 – May 2020

Swarmio Inc

Halifax, NS

- 🏠 Built and led the development team delivering end-to-end platform products at global consumer scale
- 📋 Implemented agile processes and tools; granting visibility and consistency to development cycles
- 🔒 Evolved legacy platform components to meet emerging business and technical demands
- 🔒 Lead design and transition to cloud-native microservice-based platform architecture and declarative delivery pipelines

Technical Director

March 2012 – September 2018

Contagious Gaming Inc

Charlottetown, PE

- 📁 Led evolution of an in-house regulated real-money wagering platform, audited and compliance-bound, to mobile devices and cloud hosting
- 🔒 Technical design & execution of interactive products and supporting services for clients including: Zynga, A&E, National Geographic, and Kaplan K12
- ✂️ Lead R&D of prototype software and hardware integrations for iOS, Android, Nintendo Wii, and Microsoft Kinect

Game Developer

March 2009 – March 2012

Telos Entertainment

Charlottetown, PE

-  Integrated custom-trained neural networks for phoneme-based voice recognition in an early childhood literacy product
-  Technical design & development of internal and contract interactive titles
-  Unity/C#, Objective-C/Java native extensions, JavaScript/TypeScript/AS3, and Java/Ruby/Node.js backend services

EDUCATION

University of Prince Edward Island

Bachelor of Science in Computer Science

Charlottetown, PE

2005–2010

HIGHLIGHTED PROJECTS

Swarmio Core | *Java, Spring Boot, React, PostgreSQL, Keycloak, Vault, Kubernetes, ArgoCD*

Sovereign AI delivery platform: tenant portal, APIs, and self-service instance provisioning

-  Multi-tenant domain model: operator/tenant hierarchy, identity and authorization, per-tenant resource scoping
-  Declarative instance provisioning: application catalogue, secret injection, and GitOps-driven deployment
-  Usage accounting and chargeback: per-tenant utilization reporting and budget enforcement

Swarmio Conductor | *Multi-tenant LLM gateway: vLLM, Ollama, Bedrock, Langfuse*

White-label AI gateway giving operators governed access to hosted and self-hosted inference

-  Thin-broker architecture: team-per-tenant isolation, virtual key registry, idempotent provisioning
-  Budget ceilings, spend attribution, and monetization seams for operator resale
-  Multi-backend model routing across regions, with in-country inference for data residency

Regulated Wagering Platform | *Web/PWA: Java, Spring, React, Angular, MySQL*

Real-money sports wagering and instant-win gaming for audited, regulated markets

-  Collaborate with business stakeholders (C-Suite) to design and implement new features and functionality
-  Migrate legacy web application to modern rendering (React/HTML5) and PWA packaging
-  Design and implement cloud-based deployment and scaling strategy

Ooka Island | *Unity: PC/macOS, Ruby, MongoDB*

Educational software for early childhood literacy development

-  Design and development of core application structure and supporting backend systems
-  Integration of custom trained neural networks for phoneme-based voice recognition

TECHNICAL SKILLS

AI Platform: Multi-tenant LLM gateways (routing, virtual keys, budget & spend governance), hosted & self-hosted inference (vLLM, Ollama, Bedrock), LLM observability, agentic development workflows (MCP)

Platform: Multi-tenancy & identity (Keycloak/OIDC), usage accounting & chargeback, self-service provisioning, white-label & co-branding

Governance: Data residency architecture, cross-border transfer mechanisms, tenant isolation, data classification

Languages: Java, Scala, C#, Python, TypeScript/JavaScript, SQL / NoSQL, HTML/CSS

Frameworks: Spring Boot, Play, React, Svelte, Django, Node.js

Data: PostgreSQL, MySQL / MariaDB, MongoDB, Redis

Delivery: Docker, Kubernetes, Helm, ArgoCD / GitOps, GitHub/GitLab CI, Vault

Cloud: AWS, GCP, multi-region & edge

Developer Tools: IntelliJ IDEA, Visual Studio (+Code), Xcode, Emacs, (neo)vim, git

Org: Atlassian (Jira, Confluence), ELK

Rich Media: Adobe Creative Suite, Davinci Resolve, Blender, Unreal, Unity
